

NATURE'S SUNSHINE

Hydrated Bentonite

GOOD FOR

Digestive System

Colon (Large Intestine)

Small Intestine

SIZE **32 fl oz**

ITEM # **1725**

SERVING **1/2 tsp**

SUPPLY **378 days**

DIRECTIONS FOR USE Take one-half teaspoon (2.5 mL) with a glass of water once daily.

— How the Key Ingredients Work

Hydrated Bentonite works by drawing unwanted substances through your digestive tract so your body can move them along naturally. This simple, time-honored clay formula is designed to support your colon, gut lining, and overall cleansing routine from the inside out.

Sodium — Electrolyte Balance — Sodium is one of the most important minerals your body relies on every single day. It helps keep fluids in balance throughout your system, supports healthy cell function, and plays a key role in making sure your body's internal environment stays stable and well-regulated.

Sodium — Digestive System Support — Your digestive system depends on proper fluid balance to keep things moving smoothly. Sodium helps maintain the right conditions in your gut so that your intestines can do their job — absorbing what your body needs and moving everything else along efficiently.

Sodium — Colon Health — A well-hydrated colon is a healthy colon. Sodium helps your body hold onto the right amount of fluid in the large intestine, which supports comfortable, regular movement through your colon and helps your body's natural cleansing process work the way it should.

Sodium — Small Intestine Support — The small intestine is where most of your nutrient absorption happens, and sodium plays a direct role in that process. It helps move nutrients across the intestinal wall and into your bloodstream, keeping your digestive system working efficiently from top to bottom.

Sodium — Whole Body Cleanse — When your body is going through a cleanse, keeping your electrolytes balanced is especially important. Sodium helps your system stay hydrated and functioning well during the cleansing process, so your body can focus its energy on clearing out what it doesn't need.

Sodium — Hydration During Cleansing — Staying properly hydrated is one of the most important parts of any cleanse. Sodium is your body's primary tool for managing fluid levels, helping water get to where it's needed most so your organs and tissues can support the cleansing process effectively.

Sodium — Heavy Metal Cleanse Support — During a heavy metal cleanse, your body is working hard to move unwanted substances out through the digestive tract. Keeping your electrolytes — including sodium — in good balance helps your system stay strong and supported throughout that process.

Sodium — Leaky Gut Support — A healthy gut lining depends on a well-functioning digestive environment. Sodium helps maintain the fluid balance and cellular conditions that your intestinal lining needs to stay intact and do its job of keeping the right things in and the wrong things out.

Sodium — Environmental Toxin Defense — Your body encounters environmental stressors every day, and your digestive system is one of its first lines of defense. Sodium supports the healthy fluid environment your gut needs to keep working efficiently, even when your body is dealing with outside challenges.

Sodium — Membrane and Cell Support — Every cell in your body uses sodium to maintain its charge and communicate with neighboring cells. This behind-the-scenes work keeps your tissues healthy and responsive, which matters especially when your body is in the middle of a cleansing or detox routine.
