

NATURE'S SUNSHINE

Protease Plus

GOOD FOR

Digestive System

Immune System

Small Intestine

SIZE **90 Capsules**

ITEM # **1841**

SERVING **1-3**

SUPPLY **15-90 days**

DIRECTIONS FOR USE Take 1-3 capsules with or between meals, once or twice daily.

— How the Key Ingredients Work

Protease Plus brings together carefully chosen ingredients to help your digestive system break down food more comfortably and support the gut lining that keeps your whole body feeling its best. When digestion runs smoothly, your immune system and overall wellness get a real boost too.

Beet — Digestive Wellness — Beet root is a naturally nourishing vegetable that brings a range of plant compounds to your digestive routine. Its gentle, food-based nutrition makes it a supportive addition to a formula focused on keeping your gut environment balanced and your body feeling well day to day.

Beet — Antioxidant Support — Beet is packed with natural plant pigments called betalains along with polyphenols — both known as powerful free-radical fighters. Research shows these compounds help protect cells from everyday oxidative stress, which is great news for your gut lining and overall immune resilience.

Beet — Immune System Strength — A healthy gut is the foundation of a strong immune system, and beet's rich antioxidant content plays a supporting role here. By helping to reduce oxidative stress throughout the body, beet contributes to an internal environment where your immune defenses can function at their best.

Beet — Red Blood Cell Support — Beet root is one of the richest vegetable sources of folate and also provides a meaningful amount of iron — two nutrients your body relies on to make healthy red blood cells. Small human studies have shown improvements in hemoglobin and red blood cell counts with beetroot supplementation, especially in those with low iron.

Beet — Post-Illness Recovery — After an illness, your body needs extra nutritional support to rebuild and recharge. Beet's combination of folate, iron, and antioxidant plant compounds makes it a wholesome ally during recovery, helping to replenish key nutrients and support the body's natural healing processes.

Beet — Arterial & Circulatory Health — Beet is naturally rich in dietary nitrates, which the body converts into nitric oxide — a compound that helps blood vessels relax and widen. Clinical studies confirm that beetroot can help lower blood pressure and support healthy blood flow, benefiting circulation throughout the body.

Beet — Energy & Athletic Vitality — Thanks to its natural nitrate content and the nitric oxide it helps produce, beet has been shown in multiple research reviews to support oxygen efficiency and endurance during physical activity. Whether you're recovering from illness or simply staying active, beet can help your body keep up.

Beet — Small Intestine Support — The small intestine is where most of your nutrient absorption happens, and keeping it healthy matters enormously. Beet's folate and antioxidant compounds help nourish the cells lining this critical part of your digestive tract, supporting the integrity and function of this key body system.

Beet — Food Sensitivity & Gut Comfort — When the gut lining is well-supported and digestion is running smoothly, food sensitivities can feel more manageable. Beet's nourishing plant compounds help create a healthier internal environment, which is an important first step in addressing the discomfort that can come with food sensitivities.
