

NATURE'S SUNSHINE

XyliBrite Toothpaste

GOOD FOR

Gums

SIZE **3.5 oz tube**

ITEM # **5420**

DIRECTIONS FOR USE Brush with XyliBrite between meals.

— How the Key Ingredients Work

XyliBrite Toothpaste brings together a thoughtfully chosen blend of natural ingredients that work together to clean teeth, freshen breath, and support a healthy mouth environment. Each ingredient plays its own role, so your whole mouth gets the care it deserves.

Coconut Oil — A beloved natural ingredient with centuries of use, coconut oil helps create a cleaner mouth environment by supporting healthy bacterial balance. Studies show it can reduce the bacteria linked to bad breath and plaque, leaving your mouth feeling noticeably fresher after every brush.

Baking Soda (Sodium Bicarbonate) — A gentle, time-tested tooth polisher, baking soda works by mildly buffering the acids that can build up in your mouth after eating. It helps neutralize that acidic environment, which is great news for your enamel, and it leaves teeth feeling smooth and clean without harsh abrasion.

Stevia — Instead of artificial sweeteners, XyliBrite uses stevia — a naturally sweet leaf from South America — to give the toothpaste a pleasant taste without adding sugar. That means you get a flavor you actually enjoy without feeding the bacteria you're trying to brush away.

Sodium — Sodium, in the gentle form found in this formula, plays a supporting role in keeping the toothpaste's texture and consistency just right. It also contributes to the mild cleansing action that helps lift debris and residue from the surface of teeth, leaving your mouth feeling clean and refreshed.

Coconut Oil (Breath Support) — Beyond general cleaning, coconut oil has been specifically studied for its role in freshening breath. Research involving oil pulling — swishing with coconut oil — found meaningful reductions in the bacteria most responsible for halitosis, making coconut oil a natural fit in a toothpaste focused on lasting freshness.

Coconut Oil (Antifungal Support) — The natural fatty acids in coconut oil — including lauric, capric, and caprylic acids — have been shown in studies to help keep yeast and fungal organisms in check. This makes coconut oil a smart addition for supporting a balanced, healthy oral environment day after day.

Baking Soda (Enamel-Friendly Polish) — Unlike harsh abrasives, baking soda is one of the gentlest ways to polish teeth. It has a long history of safe use in oral care and is widely recognized for helping remove surface stains while being kind to enamel — so your teeth look brighter without being worn down.

Stevia (Antioxidant Support) — Stevia isn't just a sweetener — its leaf extracts contain natural plant compounds that have been shown in research to support the body's own antioxidant defenses. In a toothpaste, that means you're getting a touch of extra plant goodness alongside a great clean taste.

Coconut Oil (Oral Microbiome) — A healthy mouth starts with a balanced community of microorganisms, and coconut oil helps support that balance. Clinical studies have found that regular use can reduce salivary bacterial counts, which supports not just fresher breath but an overall healthier oral environment.
